WELCOME

The pleasure of enjoying your time

The tranquillity of being in the best hands.

The way towards innovation in waterless car wash has just begun and it bears a Spanish signature. The future is now.

Ecowash, first Spanish company in offering a waterless mobile car wash service, gives you the best care for your vehicles. Because a great vehicle needs a great team and deserves a five-star care.

A new concept of ecological car wash, in which washing without water is possible and also beneficial thanks to innovation. Innovation at your disposal, allowing you to invest your time doing what you most desire while Ecowash takes care of everything. We present you a whole world of professional car wash services, offering you fully-personalised solutions. **Discover the feeling of having a brand new car after each wash.**

Waterless car wash is possible because, thanks to **ecotechnology** (the ecological engineering capable of satisfying human needs while minimizing the environmental impact), we have developed a range of biodegradable products which clean, take care, protect and maintain the aesthetic of every kind of vehicles.

We take the professional car wash to your home, to the doorstep of your job or while you practice your favourite sport because we move to where the vehicle is located, adapting us to your schedule. A professional, effective and ecological service because with each car wash, an average of 250 litres of water stay where they should be.

ADVANTAGES

Innovation today, **evolution tomorrow.**

- ▶ First of all, **convenience**, because our car wash in situ means cost savings regarding the travel of the vehicle and above all, saving time and inconveniences as a result of those travels.
- ▶ **Quality**, we stand out for our utmost care and fully-customised treatment, leaving the vehicles impeccable for their use or sale, as befits a **five-star** service.
- ▶ **Availability**, with our dry clean system, every textile part of the vehicle interior will be clean and dry in the same process. **Immediate availability for its use.**
- ▶ **Harmless, totally autonomous and light equipment.** In this way, we avoid the spillage of waste and annoying noises. Being a harmless system the washing is conducted in the same site where the vehicle is located, without the need for enabling a car wash area.
- ▶ **Tranquillity**, because our **professionalism, seriousness and thoroughness** have positioned us as leaders of waterless car wash and that has a name; **guarantee.**

SERVICES

**Maximum care,
maximum protection.**

External cleaning:

We apply a special treatment to the bodywork of the vehicle that eliminates dirt and waxes, waterproofs and protects it at the same time, giving a new shine to the paint. Plastic materials are treated with specific products to bring back their natural colour and shine, protecting them at the same time from external climatological damage. For the glass we use an exclusive cleaner which ensures the transparency and properties of it. The special product for the care and maintenance of the tyres achieves the elimination of any attached dirt and obtaining a unique shine.

Internal cleaning:

The interior cleaning is made thoroughly and extensively with brushes and specific products for each material (skin, leather, plastic...) achieving the elimination of the most hidden dirt in trims, doors, grids, etc. The applied products are antistatic, preventing the easy adherence of dirt in the surfaces and allowing the client to enjoy the cleanness for a longer time.

Textile upholstery cleaning:

A fabric and colour test is previously done to choose the suitable method and products for each case, removing any type of dirt. Thanks to this exclusive cleaning service, you can enjoy your impeccable and completely dry upholstery in just a few hours.

Cleaning, hydration and nutrition skin and leather:

For skin or leather upholstery, we apply exclusive cleaners for tanned leather and treatments of maintenance and nutrition, which helps to extend the original qualities of it. We adjust the level of **hydration and elasticity** in these very delicate materials, avoiding its deterioration and ensuring its optimal conditions.

SERVICES

**Maximum care,
maximum protection.**

Cleaning of carpets and roofs:

As well as in the cleaning of upholsteries, we perform a deep vacuuming over the complete carpeted area; roofs and carpeted flooring. Once the vacuuming is done, we proceed to the cleaning by removing any dirt and leaving at most a 5% of humidity in the area. We recommend to complement it with our ozone sanitation and deodorization treatment.

Maintenance service:

With our exclusive maintenance service, you will always preserve your vehicle in the best conditions. The loyalty of our clients is rewarded with a 40% discount when hiring a weekly thorough cleaning.

Ozone treatment:

Sanitizing and deodorizing treatment against bacterial agents, leaving a clean, pleasant and odour-free environment. Ozone has the property of destroying odours by directly attacking the source that produce them without adding any chemical components.

Polishing of headlights:

Recovery of the complete transparency of your headlights, improving the visibility and security in the driving, bringing back its shine and lighting capacity. We eliminate scratches and defects, showing optimal headlights that will renew the image and aesthetic of your vehicle with the convenience of a home service.

The footprint of commitment

Proud of our commitment

The footprint of commitment has measures, shape and content. Ours is measured to date in 55 million litres of water saved. We are convinced that the future of water will depend on the awareness that every company or individual acquires, the respect towards it and the proper use that we give to it.

In Ecowash we work and will continue working to ensure the sustainability, the energy conservation and to keep an average of **250 litres of water** per wash where it should be.

The challenge of saving water will be accomplished if society and technology move forward towards the same goal. Being aware of the importance of a project that respects and cares for our environment, Ecowash has a firm environmental commitment in which we save water for every vehicle that goes under our system, we avoid the polluting spillage of waste water to the environment and of course, the energy savings of traditional water purification systems.

The emerging world of renewable energies, with companies aware of the environment and socially responsible, is showing us that it is still possible to create green businesses with a future.

Being aware of the increasingly scarcity of natural resources means being capable of anticipating difficulties that may arise, finding viable solutions that are also beneficial for your vehicle.

Having in your hands the possibility of creating a footprint, how much will your footprint measure? How valuable will be your commitment? We are convinced that the numbers will speak for themselves. **Let us listen to them.**
